

# User Persona: Alex Rivera

## Overview

Alex is a volunteer admin for a local amateur football club, coordinating players, booking pitches, arranging training sessions, and keeping everyone informed. He seeks tools that reduce manual logistics, increase visibility across squads, and help him keep fixtures and training on track without disrupting the team's existing routines.

## Demographic Information

- Name: Alex Rivera
- Age: 33
- Occupation: Team/League Admin, local amateur football (20–60 players), Manchester, UK

## Background and Context

Alex oversees pitch reservations, match bookings, training schedules, and roster availability. He coordinates with captains, coaches, venue managers, and referees, and communicates with players across two squads. He's tech-comfortable but time-constrained, balancing structure with the realities of shifting player availability and venue constraints.

## Goals and Motivations

- Keep fixtures and training locked in 3–4 weeks in advance with minimal last-minute changes
- Maintain 90%+ training attendance and reduce no-shows/cancellations
- Cut back-and-forth scheduling messages by 50% within a season
- Gain real-time visibility into availability, bookings, and RSVPs
- Standardize how new players and coaches get set up (<1 week ramp to participation)
- Proactively resolve conflicts (venue, refs, overlapping events) before they impact the team

## Pain Points and Frustrations

- Information scattered across WhatsApp, emails, spreadsheets, and league portals
- Manual reminders and attendance tracking consume 4–6 hours/week
- Notifications are noisy or late; it's hard to see who's in, out, or on standby
- Limited role-based visibility creates dependencies on Alex for simple updates
- Mobile experiences are clunky pitchside when plans change
- Change management is hard: new tools disrupt established chat habits

## Behaviors and Preferences

- Daily Tools: WhatsApp, Google Calendar, email, league portal, spreadsheets
- Device Use: Desktop for planning; mobile on the touchline and during travel
- Workflow: Starts with a schedule check (fixtures, pitch availability, RSVPs), reviews conflicts, confirms bookings, sends reminders, posts updates
- Decision Style: Data-first, favors clear calendars, availability tallies, and attendance trends over raw lists
- Adoption Drivers: Fast time-to-value, easy integrations (calendar, messaging), minimal training (video walkthroughs <5 min), strong search and self-serve help
- Security/Compliance: Needs audit logs and role-based access for captains/coaches to ensure accountability

## Quote

"I don't need another app—I need one place to see who's in, what's booked, what's off, and the fastest way to fix it."

## Implications for Product Teams

- Prioritize real-time schedules with RSVP tracking, availability summaries, and conflict detection
- Offer turnkey integrations with common calendars, messaging apps, and league portals
- Provide quick-start team/league templates, role-based views, and guided setups
- Optimize mobile for quick checks, confirmations, and messaging on the touchline
- Include lightweight exports and scheduled summaries (fixtures lists, attendance reports) for stakeholders
